

Report Writer

Objective

To fulfill your unique reporting requirements by allowing creation of additional custom reports without any programming skills.

The Value of Report Writer

- Quickly and easily produce custom reports
- Click-and-go reporting via the report wizard
- Intuitive interface enables design by non-programmers
- Flexible reporting with run-time prompts
- Built-in data dictionary
- Easy integration to third-party sources
- Export data in multiple formats for third party use
- Daisy-chain reports for management packs
- Multi-level security for sensitive reports and data
- Secured update function

Matching Report Writer to your business

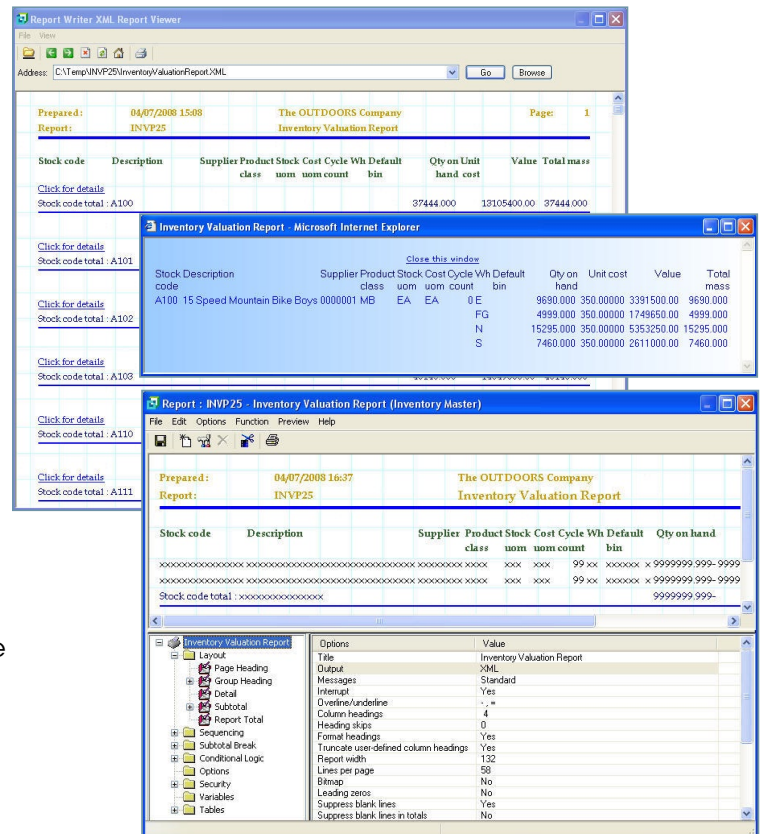

- Custom report formatting to suit your company standards
- Bitmap backgrounds provide watermarks and company logos
- Report in default sequence or define up to 10 levels of custom sorting
- Flexible selection criteria based on run-time prompts
- Run-time selection of Summary or Detail reporting
- XML Output:
 - XML Output wizard guides you through publishing options
 - Customizable stylesheets for company themes or plain XML
 - Sophisticated layout control
 - Summary reports can drill down to detail
 - Automatic publishing to intranet and internet available
- Security:
 - Define Password and Operator/Group level security per report
 - Protect report creation and execution
 - Password protect specific tables
 - Globally restrict access to Tables and Columns
- Standard linkages for easy reporting across multiple tables
- Export report definitions between locations
- Provide instruction with report narrations
- Zero programming skills required

Processing

- Top X reporting allows reports such as top 20 selling items
- Grand totals and up to 5 levels of subtotals per report
- Up to 100 user-defined variables per report
- Run-time prompts and check boxes provide great flexibility
- Sophisticated conditional printing and positioning
- Simple to use click and edit interface with preview
- Arithmetic calculations including power and square roots
- Powerful include and exclude logic with multiple level and/or logic

Integration

- Built-in access to data from all SYSPRO modules
- Support for SQL Server and ISAM sources
- Publish XML reports to Intranet/Internet systems
- Output results for use in Microsoft Excel

The image displays three overlapping screenshots of the SYSPRO reporting interface:

- Top Window:** 'Report Writer XML Report Viewer' showing a report for 'The OUTDOORS Company' titled 'Inventory Valuation Report'. It includes a table with columns: Stock code, Description, Supplier Product class, Stock uom, Cost uom, Cycle uom, Wh count, Default bin, Qty on hand, Unit cost, Value, and Total mass. A 'Stock code total' row is visible for A100.
- Middle Window:** 'Inventory Valuation Report - Microsoft Internet Explorer' showing a detailed view of the report for stock code A100, listing items like '15 Speed Mountain Bike Boys' with their respective quantities and values.
- Bottom Window:** 'Report : INVP25 - Inventory Valuation Report (Inventory Master)' showing a report configuration window with a tree view on the left (Layout, Page Heading, Messages, Internet, Overline/underline, Columns headings, Heading skip, Formal headings, Truncate user-defined column headings, Report width, Lines per page, Bimap, Leading zeros, Suppress blank lines, Suppress blank lines in totals) and a table of options and values on the right.
